

## Day 4 Discussion

Rockside Road near I-71

Discussion / Points of interest

Can students identify where this scene is located?

Consider design elements:

- planned parking for cars
- public transit
- accommodation for walking
- attractiveness
- accessibility

Consider environmental impacts:

--lack of greenery

--*non-point pollution* problem:

1. Rain will carry all the pollutants from the parking lot into the storm sewer, which takes the contaminated water to our lakes and rivers.
2. Too much asphalt often causes flooding in nearby communities because of a lack of land to absorb rainfall.
